

Traxdor Legion Guard Armorshutt

The Legion Guard Armorshutt is more than an appealing aluminium shutter it integrates style, security and sound performance. For strength and security, an optional three-point lock secures the shutter door in three positions with one lock-action and a solid rod 'blade-skeleton' connecting the blades internally. Apart from its exclusive features and uncluttered design even the 'little matters', which for most consumers are determining factors, have been attended to. As a result, annoying frustrations like panel sagging, unstable louvres, outside light, 'see-through' areas, as well as wind and rain leakages, has been eliminated!

All Legion Guard Armorshutt security shutters are manufactured at our full-house, quality-managed factory. The final manufacturing process includes a dual cutting edge surface treatment and coating procedure that adds an important lasting touch to the product for a lifetime of service. Firstly, advanced chromotizing of the aluminium prevents the occurrence of white rust once the product is installed. Secondly, the in-house powder-coating process employs high-quality UV protected, non-colour fading, SABS-approved powders, to ensure a superior quality finish. The result is a truly reliable shutter door and/or window for both coastal and inland conditions.

FEATURES AND BENEFITS

- Each door is custom-measured and custom-manufactured with specific door needs, sizes and colour preferences taken into account. Installed by Traxdor trained technicians.
- A solid rod 'blade-skeleton' inside each shutter door and window ensure a robust blade structure. Literally, every shutter blade ("louvre") is reinforced with an alu rod.
- Four-way interlocking blades help to create blade strength with high impact resistance.
- Interlocking blades & -edges ensure a 'water-, wind-, and light-resistant' security shutter, with excellent water run-off.
- Blade locking for additional security. A dual-function handgrip at each 'blade section' (that blends with the shutter colour) operates as a blade adjuster and keyless blade lock.
- Should you want your louvre blades open you can still enjoy peace-of-mind protection. This will give you unobstructed airflow while security is on guard.
- Improved tamper-proof lock security is achieved through an optional three-point lock that secures the shutter door in three positions with one lock-action. This is a stainless steel hook and latch lock with anti-lifting safety pins.
- Regular quality screening during the development stages shaped an high impact-tolerant security shutter that provides premium security.
- Multi-purpose security shutters providing burglar proofing as well as blinds and curtaining in one single product.
- Armorshutt gives you the ability to adjust the blades in various combinations to suit your light and privacy preferences.
- A strong anti-lift construction is achieved with double inner framing, v-h-v joints (vertical horizontal vertical), heavy-duty hinges and stainless steel security fasteners. Not only does it improve the tamper-proof design and ensure strength and resistance under attack but also prevent panel sagging.
- Further structural strength is achieved with heavy-duty rollers and stainless steel wheelsets. This improves the ability to keep position but most of all allow for smooth operation.
- An adjustable wireless vibration sensor alarm, unique to Traxdor Cape's product range, is built into the gate at various locations to eliminate predictability with the added ability to discard false alarms. It can be added to your existing alarm system. A LED indicates lock status. Alarm activation is triggered by a measure of vibration onto the gate.
- An optional mobile siren can extend the functionality of the sensor alarm. An additional stand-alone wireless siren can be added in the absence of an existing home alarm system, with a minimum radius of 50 meters.
- Fully rust-resistant security grade aluminium is used throughout the doors/windows and it includes the moving parts inside. This is a 'steel-strong' security grade aluminium. Certified name: Tempered Aluminium 6063-t6.
- Advanced anti-rust pre-treatment prevents white rust to occur on the surface of the aluminium in coastal areas.
- Superior powder-coating using high-quality UV protected, non-colour fading, SABS-approved powders ensures further corrosion resistance and a superior finish.
- The exclusive patented security door profiles in the market improves the product's deterrence score.

WARRANTY

Correct maintenance will ensure your security shutter door stays in a working condition. Ask your Traxdor Security Consultant about our recommended maintenance procedures to ensure the validity of the full warranty.

Materials	Coastal - 10 years	Inland - 10 years
Locks, cylinders & hinges	Coastal - 10 years	Inland - 10 years
Alarm & electrical components	Coastal - 1 years	Inland - 1 years
Electrical add-ons (AAA batteries, electrical locks, etc)	Coastal - 1 year	Inland - 1 year

Life-long guaranteed cost-free repair plan in case of any illegal breach (T&C's apply).

The unique security profiles of the Legion Guard Armorshutt are the patented property of Traxdor Cape.

As a responsible manufacturer, we endeavour to design, engineer, test and install our products to give our customers the best possible security barriers technology allows. However, please remember that given enough time and the right tools, all security barriers can be breached, no matter how well they are constructed.

PRODUCT CONFIGURATION OPTIONS

SLIDING DOORS AND WINDOWS

1. MULTI-SLIDER, DOUBLE TRACK
(2 panel, double track)

2. MULTI-SLIDER, MULTI-TRACK
(multi-track, 2 to 4 panels)

Multi-sliding, Double-track doors and windows are suitable where there are two opening panels to the door or window, both of which need protection and easy access for movement and cleaning. Multi-sliding, Multi-track doors and windows have panels that open up and stack on either side of the opening.

MIDRAILS

Centre midrail

Off-centre midrail (top or bottom)

MULTI-FOLDING DOORS AND WINDOWS

1. MULTI-FOLDING (3 to 7 and 10 panels)

Legion Guard Armorshutt Multi-fold (also known as bi-fold) doors and windows run on a single track. The panels stack neatly to one side of the opening. The protective door or window screen can be configured to allow for a single or double working door or window for daily use, while the other panels remain secure. The multi-fold door or window barrier maximises the area of the opening when the unit is fully open. The system comes with shoot bolts on each panel for added security.

FRENCH DOOR AND WINDOWS

1. FRENCH (2 panels)

The Legion Guard Armorshutt French door is suitable in applications where clear door openings are required and space is limited on either side of the door frame. The panels are hinged on the left and right of the opening and open from the centre.

The Legion Guard Armorshutt French window has two operating panels, creating unobstructed views as there is no centre post. The panels are hinged on the left and right of the opening and open from the centre.

FIXED PANELS

Legion Guard Armorshutt Fixed Panels are suitable for non-opening windows and shopfronts. They can be used to enclose patios, making the area fly, mosquito or animal proof. This design can also be effective for areas that need to be screened off where a solid wall or panels is not appropriate. Fixed panels can be used in conjunction with either sliding or hinged units.

HINGED DOORS

2. HINGED (1 panel)

Legion Guard Armorshutt hinged doors are suitable for single opening doors with limited space on either side. This design can also be used in passages to secure designated areas in homes or businesses. The door can be hinged on either the left or right side, depending on the requirements of the application.

CASEMENT WINDOWS

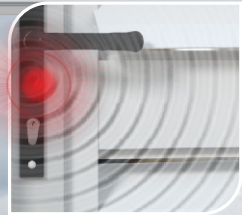

Legion Guard Armorshutt Casement windows allow easy access to the glazed windows it protects. The unit is hinged on either the left or right side of the window frame and opens outward or inward from the opposite side.

tamper alarm

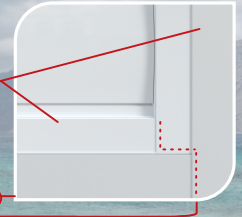

- Prevent tampering
- Indicate lock status

strong anti-lift construction

no panel sagging

- Double inner frame
- Heavy duty hinges
- V-H-V joints (Vertical-horizontal-vertical)

3-point locking

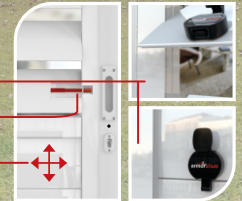

- One lock action:
- Optional and secures the shutter in 3 positions

blade strength

High impact resistance:

- Reinforced lockable blades
- 4-way interlocking blade

Interlocking blades
Interlocking edges

- no see-through
- 95% light/wind/water resistant
